

# STUDY ON THE INTERACTION BETWEEN SECURITY AND WILDLIFE CONSERVATION IN SUB-SAHARAN AFRICA

Presentation Final Report P. Elkan (team leader), Pauline Verheij (Dep. TL, EcoJust), Jérôme Tubiana (Small Arms Survey), Luc Mathot (Conservation Justice), Ken Matthysen (IPIS), François Wernerus (ind. Consultant) DEVCO/AGRECO

Study with the objective of providing the Commission with evidence and robust information/understanding on the wildlife-security nexus in Sub-Saharan Africa, in order for the Commission to:

- 1) engage in a well-informed political dialogue on the wildlife-security nexus
- 2) define an effective response and design programmes that mutually reinforce wildlife and security.

# SPECIFIC OBJECTIVES

- Provide DEVCO with a **comprehensive understanding of the interaction** between wildlife conservation and security and of how the two pillars interact with each other.
- **Highlight examples of conservation measures/actions** which have contributed to improving security and development.
- Present a **typology of the wildlife-security nexus** (triggers, stakeholders, consequences/impact ...) and propose a methodology or recommendations.

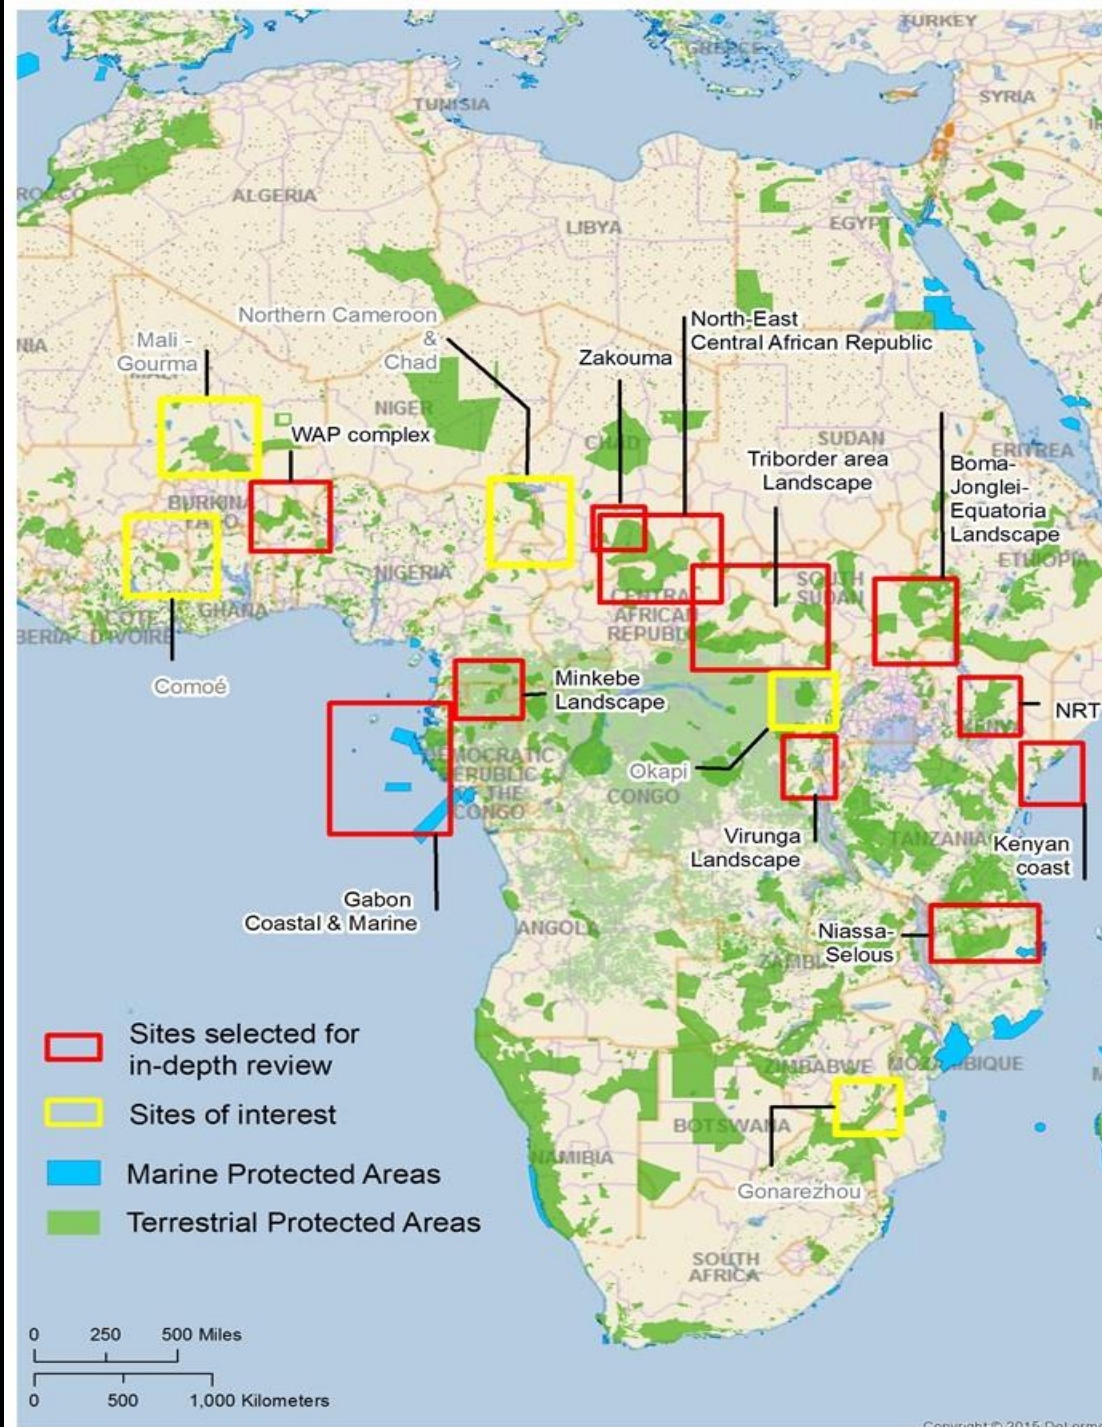

# KEY RESEARCH QUESTIONS

- 1) Where does wildlife trafficking trigger conflicts, fuel existing ones or lead to scaled-up conflicts (from local to national/regional, international)?
- 2) Where have such conflicts triggered or fuelled wildlife trafficking or hampered conservation?
- 3) How is socio-economic security undermined by trafficking and poor conservation both at local and national levels)?
- 4) How does wildlife trafficking undermine the rule of law and legitimate institutions (notably because of the links with corruption)?
- 5) How does wildlife related insecurity (whether in term of conflicts or from a socio-economic point of view) contribute to migration flows (intra-states, inter-states, global)?
- 6) How are approaches being applied to address the wildlife-security nexus as a basis for development and improving security?

## **Geographic focus:**

Although wildlife trafficking occurs worldwide, the study focused on Sub-Saharan Africa. Where impacts or consequences occur outside Africa, this has been addressed.

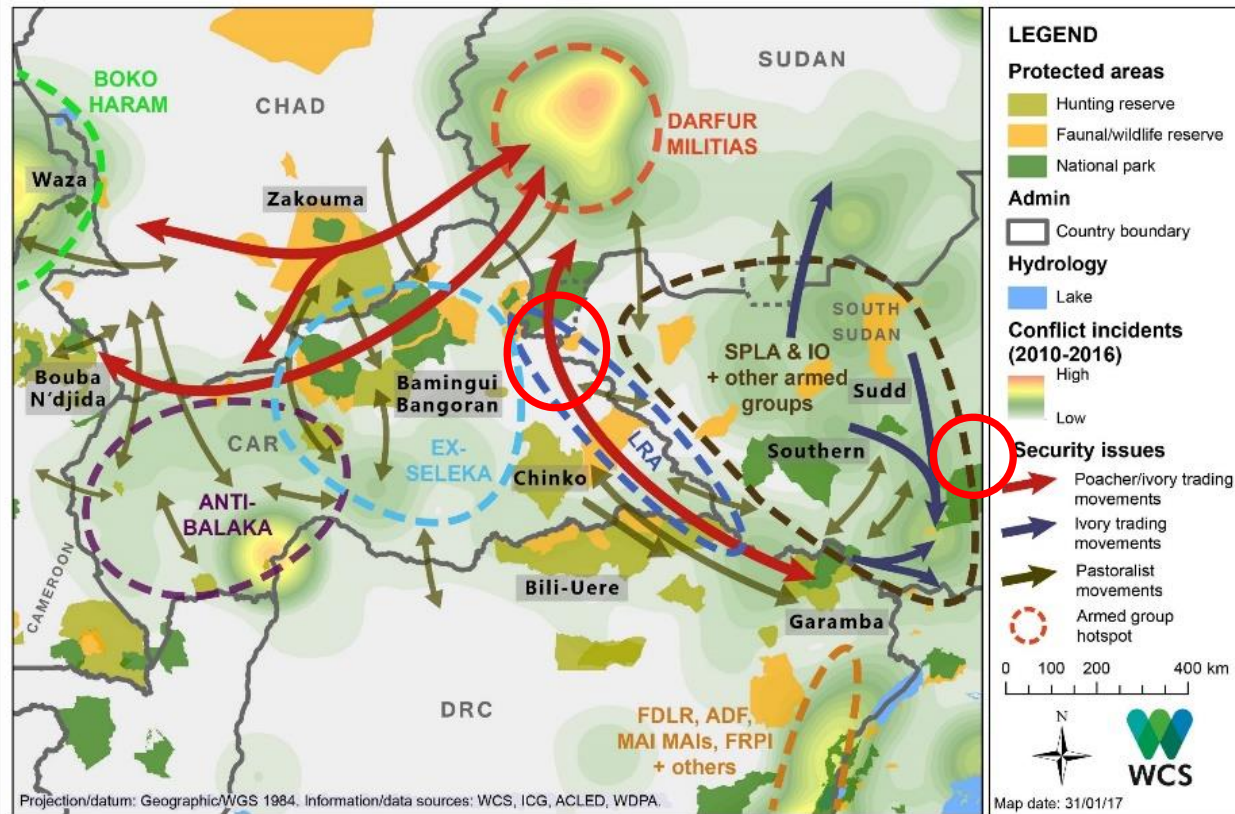

# 1. Wildlife trafficking triggers conflicts, fuels existing ones or leads to scaled-up conflicts

- A limited set of examples of **wildlife trafficking contributing directly to conflicts** and insecurity (eg. Chad, Cameroon, CAR, South Sudan, and DRC cases)
- The **potential risk** of organized terrorist group involvement in ivory trafficking and its associated financial flows exists, but at present **few cases confirmed**.
- Natural resources trafficking represent **clear potential opportunities for terrorist** and/or insurgent group involvement and benefit directly or indirectly.
- Securing **high value natural resources**, including wildlife in vulnerable areas, is a critical priority for security, conflict prevention and stabilization strategies.

## SUDANO-SAHEL REGION CONSERVATION SECURITY DYNAMICS

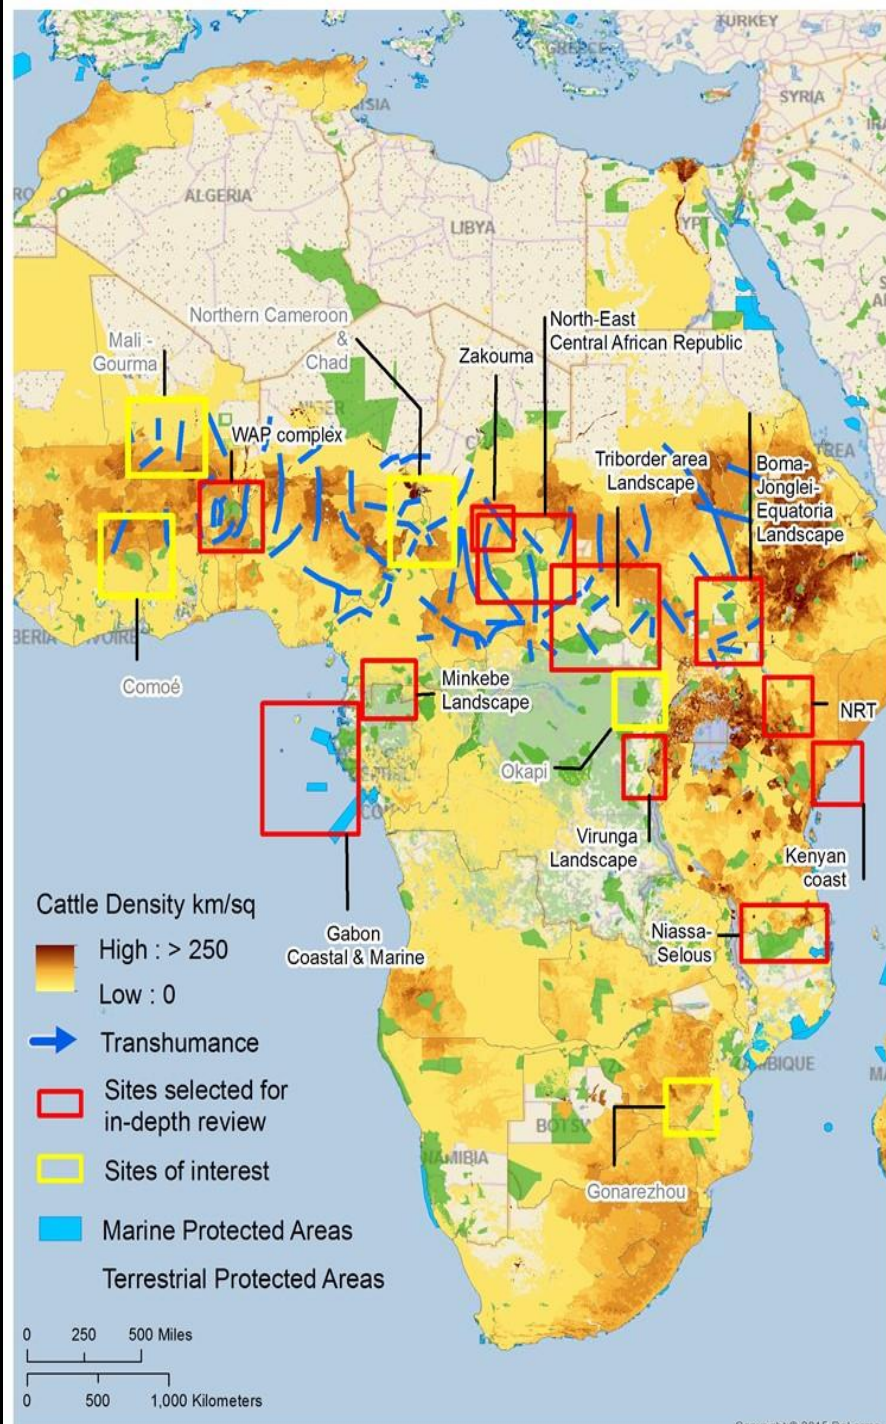

In February 2018 (following on 2012, 2013, 2015 incursions) Heavily armed poachers incursion Northern and Eastern CAR, Northern Cameroon, Southwestern Chad (18 elephants killed in Bindere Lere, 2 Chadian soldiers KIA, 6 Cameroon Soldiers KIA, 2 Community Scouts KIA)

## 2. ARMED CONFLICTS trigger or fuel wildlife trafficking or hamper conservation

- These armed groups become involved in natural resource trafficking for **financial gain**.
- Use of **protected areas as safe havens** for armed groups is widespread.
- **Transhumance pastoralists**, armed and some supported by heavily armed protection groups, cross international borders into Nigeria, Cameroon, CAR, South Sudan, DRC, Ethiopia.
- The **corruption** (at all levels) associated with natural resource trafficking undermines rule of law, credibility of Governments and contributes further to insecurity and conflicts.

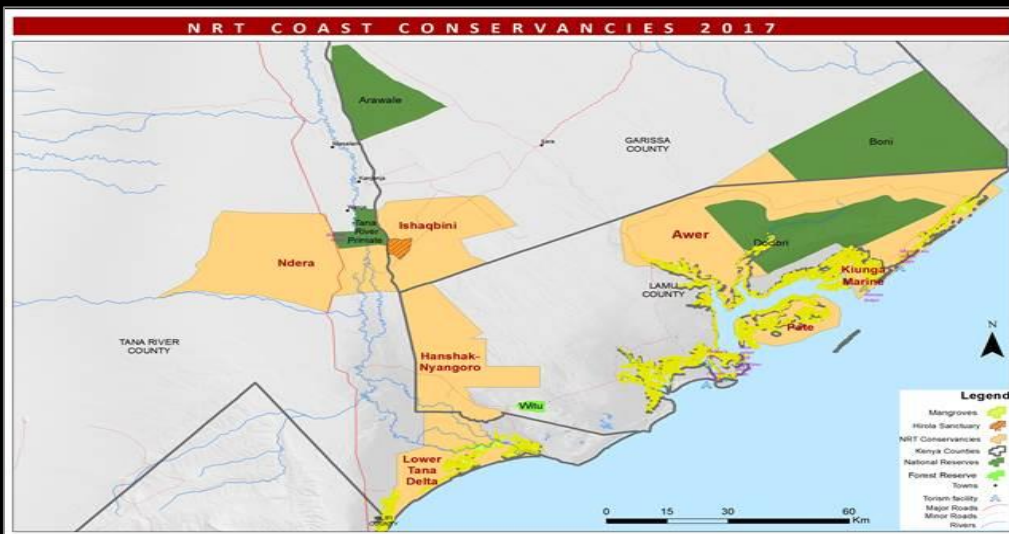

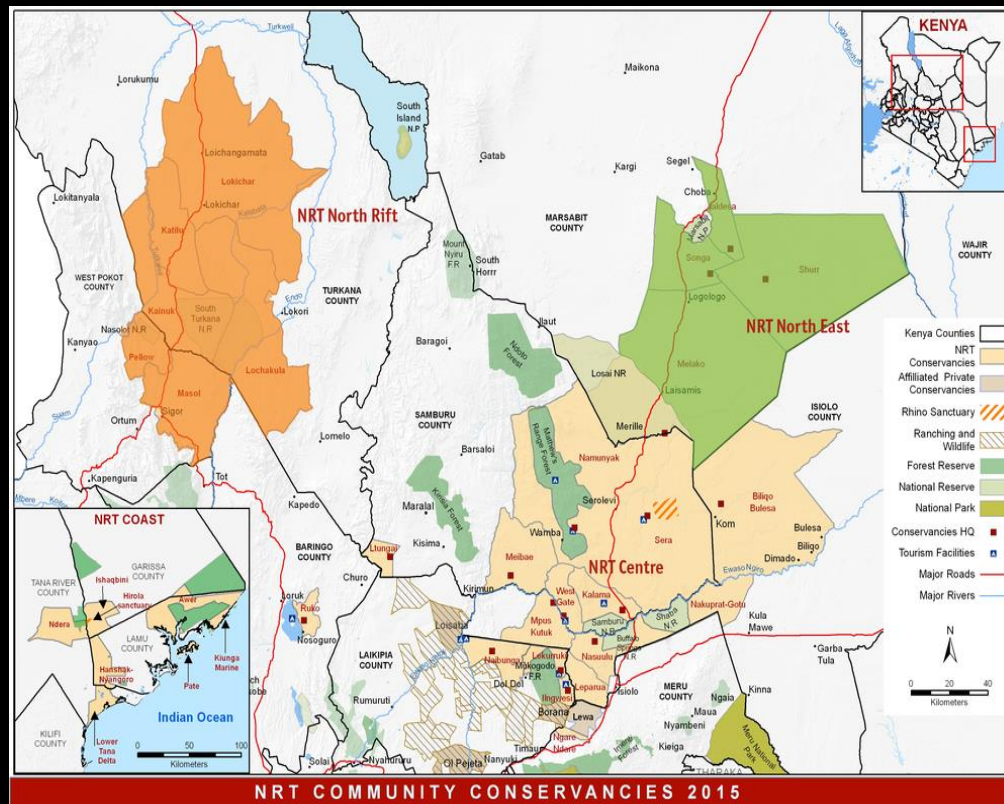

### 3. SOCIO-ECONOMIC SECURITY is undermined by wildlife trafficking

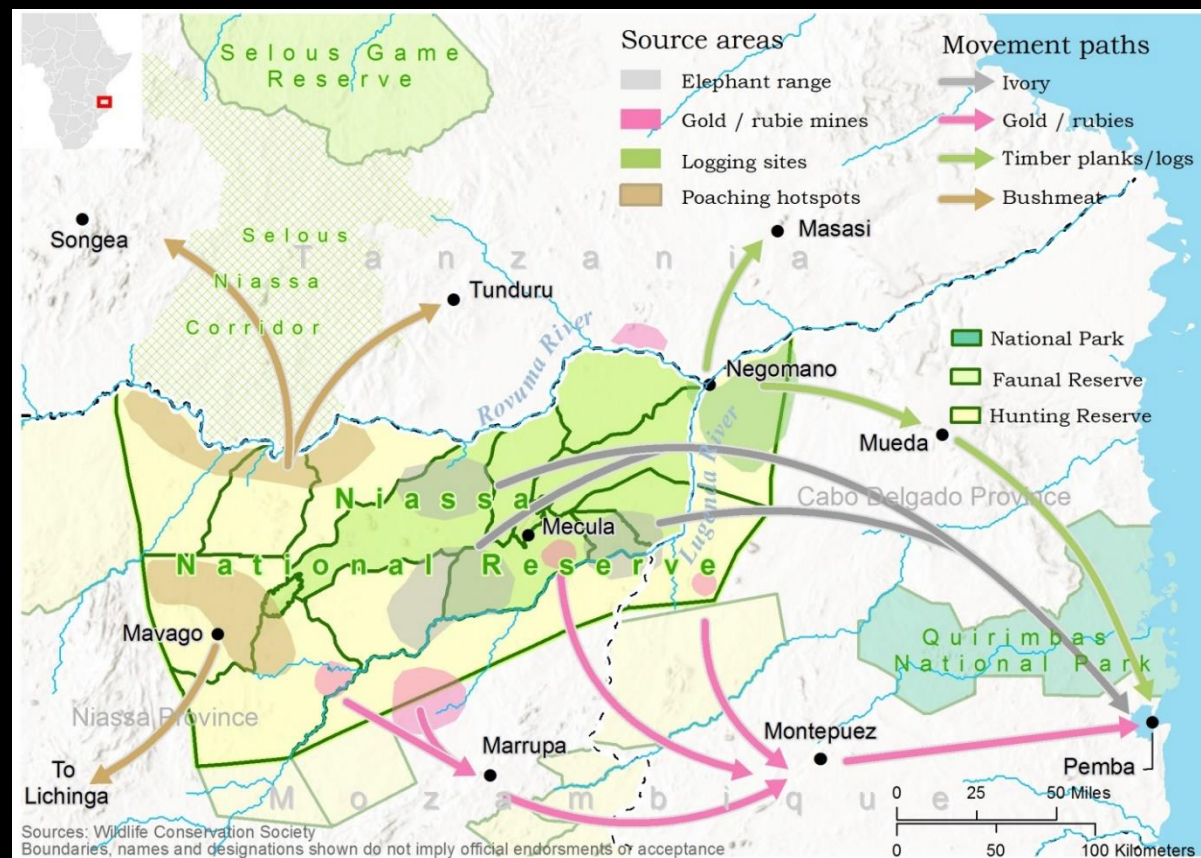

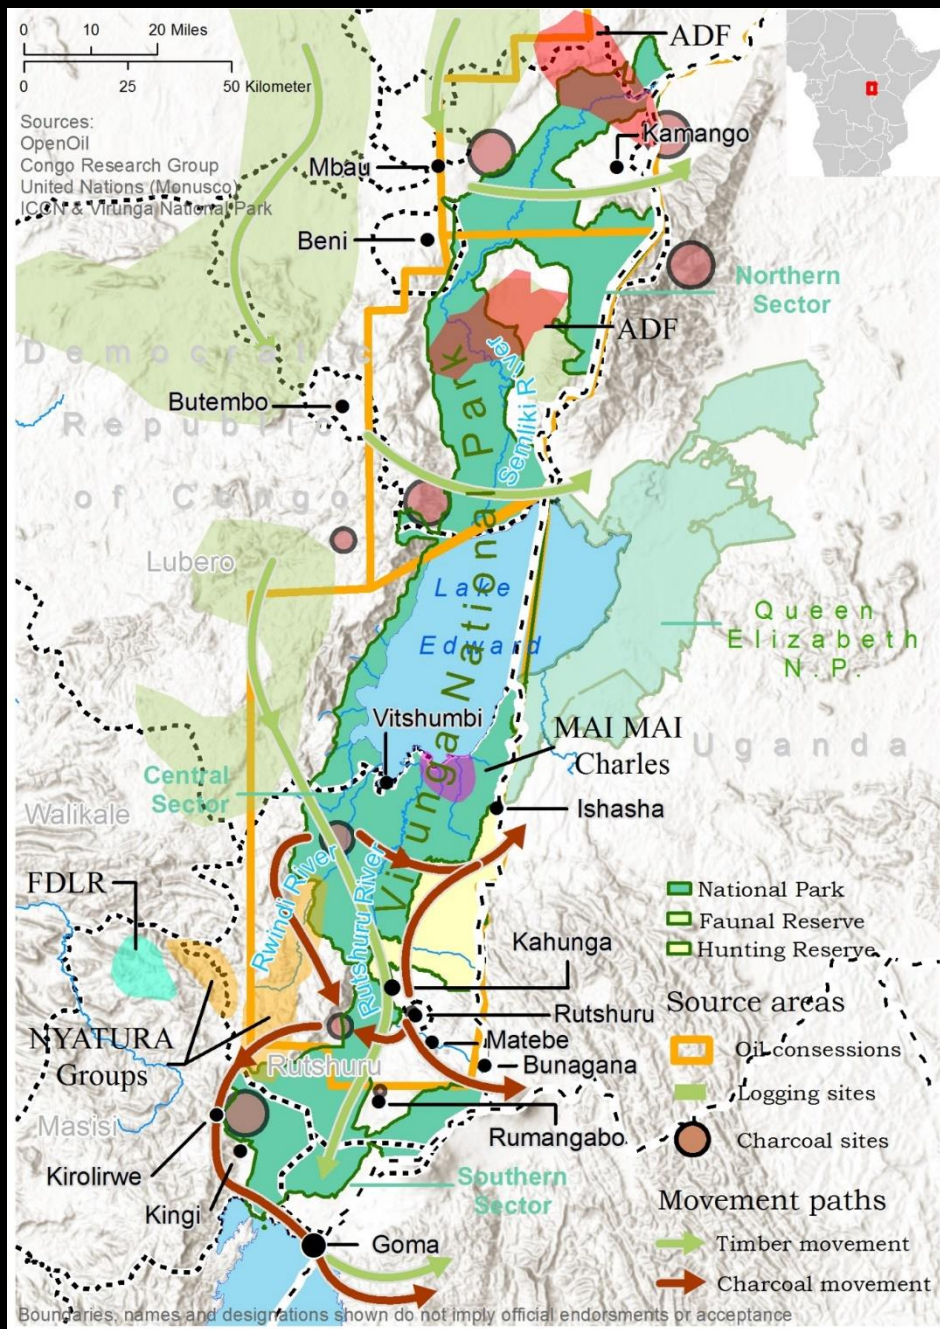

- Wildlife trafficking in Sub-Saharan Africa **negatively impacts socio-economic security.**
- Disruption of the local communities to **access to spatial areas.**
- **Wildlife resources systematically depleted.**
- **Negation of wildlife trafficking** contribute to fostering socio-economic security.

## 4. Wildlife trafficking undermines the rule of law and legitimate institutions and foster CORRUPTION

- Ranges from **local rangers and authorities** to **high level politicians**.
- Corrupt officials who may have also been involved in **corruption regarding other sectors** (e.g. drugs, human trafficking).
- Systematization by **armed groups**.
- Explicit and robust **anti-corruption programs** must be developed as part and parcel of security and conservation programs in order for stability.

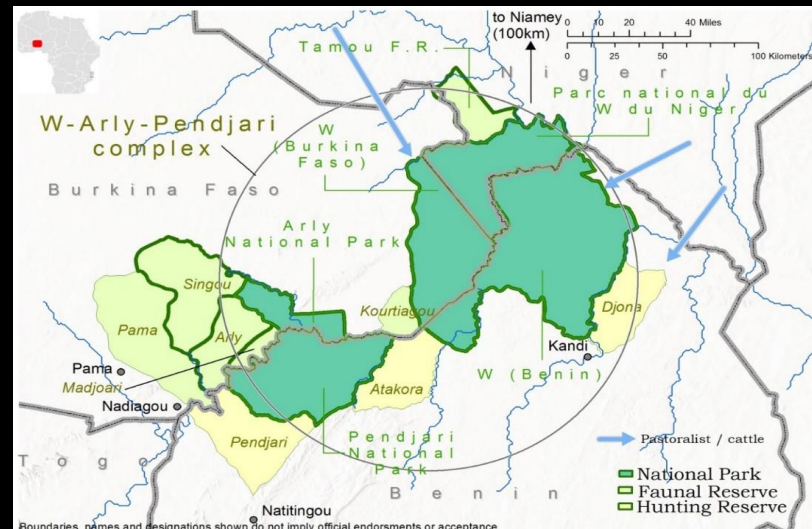

## 5. In some cases, wildlife related insecurity contributes to MIGRATION FLOWS.

- **Migration of people** due to climate change impacts, environmental degradation, and insecurity and conflict factors.
- Very critical **link between the wildlife-security nexus and human migration factors** from the perspective of protected area landscapes being subject to migration .
- Conservation and protected area management programs can **help address the roots causes of migration.**

## 6. Key approaches being applied to address the wildlife-security nexus as a basis for development and improving security

- Basic important principles for the design of robust programmatic and policy interventions which contribute to security for people and wildlife.
- The role of the private-public-partnership in protected area management.
- Funding levels need to be adequate.
- EAGLE network's methodology and program developed from LAGA and later giving rise to Conservation Justice, is an effective cooperation model for countering wildlife trafficking.
- Anti-trafficking work undertaken by National and Transnational Serious Crimes Investigation Unit (NTSCIU) in Tanzania is a national approach.

# RECOMMENDATIONS

- Key locations
- A summary review and financial commitment of some donors in different key locations and region
- Priority EU policies and strategies on conservation, anti-trafficking, development, and migration
- General strategic recommendations on programs and policies
- Increased and geographically expanded conservation-security investments and approaches
- An illustrative action plan of priority critical program and policy actions

# Wildlife trafficking as driver for conflicts and insecurity

- Protected areas in conflict areas.
- Cooperation between military and non-military partners.
- Design and implement regional strategy to engage with transhumance pastoralist.
- Support robust NRM monitoring and management programs.

## Impact on socio- economic security

- Community conservancies and Community Based Natural Resource Management (CBNRM) programs.

## Impact on Rule of Law

- Establishment/expansion of community conservancies with anti-trafficking components
- Development of focused anti-corruption strategies
- Establish mechanism of country annual reporting on specific incidents of corruption/complicity
- Mobilize EU, US and other diplomatic missions on support to the fight against corruption

## Impact on Migration

- Initiatives to enhance the capacity of pastoralist and agricultural communities to adapt to climate change, mitigate its effects and avoid/mitigate conflicts caused by climate change
- Rangeland and water management programs
- Design and implementation of targeted programs to address root causes of migration in key vulnerable landscapes

**THANK YOU**
