TO WHOM IT MAY CONCERN

Herewith I certify that Dr. Josip Kusak spent in autumn 2010, in the period from 09.09.2010 to 29.09.2010 working with my group in a project on predator-prey relationship in the Northern Apennine, Italy.
During his stay Dr. Kusak gave lessons to PhD students on my group on carnivore ecology and on the methodologies adopted to safely catch, mark and release them. His cooperation to the project was important and very appreciated by our students.
I have a high consideration of Dr. Kusak as scientist: we were both included in European specialist group studying ungulate and carnivore biology and I had the opportunity to visit his study sites and to appreciate the high level of organisation of his research.

Marco Apollonio

Full Professor of Zoology
