Science is the basis for a better future and a healthy economy! This is why, through Horizon 2020, the European Union is investing so much in efficient and responsible research and innovation.

With a budget of nearly 80 billion euro from 2014 to 2020, Horizon 2020 is the largest funding programme for research and innovation in the world. It will support excellence in science, leadership in industrial technologies and help us tackle grand societal challenges, such as climate change, food security, health and transport. These are all priority concerns of European citizens.

To further boost Europe's creativity and innovativeness, and better take into account the values and needs of society when designing our future, science needs a platform for open debate. This is why the European Commission is, this year again, one of the biggest supporters of ESOF through the Science with and for Society programme!

If you want to learn more about the possibilities offered by the European Research Area and to contribute to building a real Innovation Union, visit the EU booth n°4. We shall be glad to help you reach your goals.
