Climate Services, the intelligence behind the transition to a climate-resilient society

European Commission’s DG Research and Innovation presents at Adaptation Futures 2016 its initiative on Climate Services

Adaptation Futures 2016, European Commission’s Booth H2 Postillion Convention Centre WTC 10-13 May 2016, Rotterdam, The Netherlands
Climate Services – the intelligence behind the transition to a climate-resilient society

In order to foster informed decisions on appropriate mitigation and adaptation strategies, users - businesses, administrations and citizens - need to be able to translate the existing wealth of climate data and information into customised tools, products and information, namely ‘climate services’. These will trigger a more systemic approach to risk management, leading to climate-smart decisions. The development of markets for climate services will make the European Union a world leader in this sector and contribute to wealth and job creation.

Discover how the European Union supports the nascent market for climate services during the following sessions:

- Resilient risk management strategies for critical infrastructure within cities
  Wednesday, 11 May 2016 - 15.45 – 17.30 - Oscar Auditorium
- Adaptation as an innovation and market opportunity
  Wednesday, 11 May 2016 - 15.45 – 17.30 - Diamond Room II
- The science of adaptation practices and solutions: new challenges for assessment and communication
  Thursday, 12 May 2016 - 11.00 – 12.45 - Town Hall
- Moving towards tailored climate services in the Water Sector
  Thursday, 12 May 2016 - 13.45 – 15.30 - Leeuwen Room II
